Trans. of Holz als Roh- und Werkstoff (West Germany) 1959, v. 17, no. 5, p. 165-171.

Under the simultaneous effect of vapor and heat, an equilibrium of the moisture content of wood to the relative humidity of the surrounding air will occur. This equilibrium can be reached either by humidification or adsorption or dehumidification or desorption. S-shaped sorption curves are obtained for capillary colloidal materials with vapor sorption from wetting liquids, whereas simply curved lines are obtained from non-wetting liquids. Distinction is made between chemisorption, monomolecular sorption, polymolecular adsorption and capillary condensation. A
